

1 So-called Ibex limestone, as applied by Cheney (1948).
 2 Waldrip No. 3 bed of Drake (1893).
 3 So-called Bunger and North Leon limestones. Names brought into this area from the Brazos River drainage area, but recently rejected by Eargle (written communication) for formal usage in the Colorado River drainage because of difficulties in correlation. Upper limestone is so-called Bunger; lower is so-called North Leon.
